

JY/JLG Combined Air Dryer

JY/JLG series combined compressed air dryer is a drying equipment that comprehensively utilizes the principle of refrigeration and adsorption. It is mainly composed of two adsorption drying towers, refrigerated air dryer, valves and control systems. With zero air loss, low energy consumption and other characteristics.

Application industry:

JY/JLG series combined compressed air dryer can be used in petrochemical, light industry, textile, fertilizer, metallurgy, electric power, telecommunications, transportation and other industries to provide high-quality compressed gas for process gases in various industries.

Technical parameters:

- 1, gas volume: 1~400Nm³/min
- 2, dew point: -55 ~ -70 ° C
- 3, working pressure: 0.4 ~ 6.0Mpa
4. Intake air temperature:
≅ 45° C (low temperature type), ≅ 80° C (high temperature type)
- 5, intake oil content: ≅ 0.01mg/m³
- 6, operating noise: ≅ 75dB (A)
- 7, working environment: indoor
